

1. ACCOUNTING POLICIES AND CRITICAL ACCOUNTING ESTIMATES AND ASSUMPTIONS

The accounting policies and critical accounting estimates and assumptions applied to the Company annual financial statements are consistent with the Group accounting policies as detailed on pages 97 to 117.

2. FINANCIAL RISKS

In the course of its business, the Company is exposed to a number of financial risks: credit risk, liquidity risk and market risk (including foreign currency and other price risk). This note presents the Company's objectives, policies and processes for managing its financial risk and capital.

Credit risk

Credit risk arises because a counterparty may fail to meet its obligations to the Company. The Company is exposed to credit risks on financial instruments such as receivables, loans receivable and cash.

Trade and other receivables consist primarily of invoiced amounts owing from related parties. The recoverability of these amounts are regularly monitored with reference to the counterparties' financial performance. Where necessary, a provision for impairment is made.

The Company places cash and cash equivalents with major banking groups and quality institutions that have high credit ratings.

Loans are only granted to holders with an appropriate credit history, taking into account the holder's financial position and past experience.

The Company's maximum credit risk exposure is the carrying amount of all financial assets on the statement of financial position and sureties provided with the maximum amount the Company could have to pay if the sureties are called on amounting to R1.5 billion (2014: R1 billion).
